

Satellite communications. And more.™

SkyFile® Mail

SkyFile® Mail is a free messaging and compression tool that allows users to send reliable and cost-effective emails, e-faxes and SMS messages. Suitable for users at sea and on land, Vizada's SkyFile Mail provides two-way email, fax and SMS messaging on Inmarsat, Iridium and Thuraya mobile satellite terminals.

Simple to install, use and update, SkyFile Mail works on any desktop PC or laptop and is an ideal messaging solution for crew and personnel emailing. SkyFile Mail is part of our portfolio of Vizada Solutions™.

At a Glance

- **Data compression:** SkyFile Mail compresses data by up to 90% with a WinZip-type feature, significantly reducing connection time.
- **Full duplex mode:** enables users to send & receive messages simultaneously.
- **Crash recovery:** automatically retrieves emails if the data connection is interrupted.
- **Automatic notification:** alerts user to incoming emails.
- **SkyFile Mail via Iridium Rudics:** boosts connection quality, service availability and bandwidth, reducing connection times by more than 50%.
- **No additional costs:** SkyFile Mail software is free of charge. There are no monthly fees or license costs. Users only pay for airtime.
- **Least cost router:** automatically selects the most cost-effective data transmission mode for Inmarsat Fleet terminals according to usage (MPDS or ISDN).

Secure & Reliable Messaging. And More.

SkyFile Mail offers users a number of features and functions designed to ensure secure, reliable communications:

- Highly effective anti-virus, anti-spam filter and black & white lists block unwanted emails. Users can create their own black & white list according to personal needs.
- Shore-to-ship filtering allows users to set filtering specifications according to address name, domain name or user default configuration.
- The automated backup/restore function automatically saves data (emails, address book, archives and configuration).
- When using prepaid messaging, two Universal Card PIN codes can be registered. If one card reaches its limit, airtime credit is automatically forwarded to the other card and deducted from the second PIN.

Solutions

Efficient Management Tools

SkyFile Mail's management tools can improve how a fleet of mobile satellite terminals are administered, enhancing operational efficiency for ship managers and operators on shore:

- The unique, web-based Remote Configuration Tool provides full control of all SkyFile Mail configurations, from billing rates to sub-account management.
- The Application Programmer Interface (API) enables various applications or management programs to dispatch & receive data files via SkyFile Mail.
- SkyFile Notification of Arrival & Departure (NOAD) enables users to create and transmit electronic forms required by the U.S. Coast Guard.
- The 24-hour Non Delivery Notification (NDN) function automatically informs the sender if messages are not retrieved by the recipient.
- SkyFile Mail's multi-user component can be used by a group of people with individual, password-protected sub-account names, even within a Local Area Network (LAN).
- The split billing function sorts communications traffic into cost centers (owner, operator, charter company) to facilitate re-billing.

Prepaid Messaging for Crew Communications

SkyFile Mail version 7.0 and higher is a multifunctional tool that offers even additional flexibility for crew communications:

- Versatility: customer can use the same software for post-paid & prepaid messaging such as email, fax and SMS via Inmarsat and Iridium terminals.
- Minimal administration: with Vizada's Universal Card™, users need only one card for phone and email communications. Users can create their own prepaid sub-account.
- Flexibility: enables users to configure their own prepaid account according to their needs and budget.
- Independent: MyMail prepaid accounts (available from version 7.5 or higher) are not linked to a specific SkyFile Mail master account and can be created and used on any vessel.
- No restriction in terms of volume or number of messages: customers can set their own restrictions if required.
- Transparent prepaid functionality: credit balance and remaining time are updated in real time. Each user has access to their individual call logs.

A Wide Range of Terminals

Vizada's SkyFile Mail works across most Inmarsat terminals (except Inmarsat C/Mini C) as well as Iridium and Thuraya terminals. Two transmission modes are available for data transfer.

Terminal	Data Transfer Mode	Operating Systems
Inmarsat Fleet, FleetBroadband	Circuit & MPDS	Windows (from 95) & Vista
Inmarsat BGAN,	TCP/IP	Windows (from 95) & Vista
Inmarsat GAN	Circuit & MPDS	Windows (from 95) & Vista
Inmarsat B, B HSD, M, Mini M	Circuit	Windows (from 95) & Vista
Iridium	Circuit & Rudics	Windows (from 95) & Vista
Thuraya	Circuit	Windows (from 95) & Vista
ThurayaIP	TCP/IP	Windows (from 95) & Vista
Iridium OpenPort™	TCP/IP	Windows (from 95) & Vista
